

FipName1

Description: The FipName1 macro takes a two character State FIPS code and returns the state name in upper and lower case form.

Syntax

```
%FipName1(MyFipCode,MyStateName);
```

Notes

The state FIPS code must be a two character code with leading zeros if necessary. If the FIP code is not found, the returned argument is blank.

Example

```
data One;
  input fipcode $2.;
  %fipName1(fipcode, StateName);
cards;
39
18
;
run;

Proc Print data=one;
Run;
```

WPS Listing

The WPS System

Obs	fipcode	State Name
1	39	Ohio
2	18	Indiana
