- No complex pricing since all modules are included in one reasonable annual license.

### WPS Business Benefits

- Lower your Enterprise Software License costs by as much as 50% to 60%.
- Continue to use the same SAS language that your organization has already made an investment in.
- Maintain your developers expertise and leverage their educational investment in the SAS language by using WPS.

WPS is a SAS language alternative software application that runs on many different flavors of UNIX and Linux, Mac OS X, Windows, AIX, SUN Sparc, z/OS and z/Linux. WPS is a full featured interpreter and is a reasonably priced replacement for the most commonly used SAS system modules.

Companies of all sizes from small consulting firms to large Fortune 100 companies use WPS to manage data, create reports and out maneuver their competitors. These companies run some of their most important business processes using WPS on desktops, servers and mainframes.

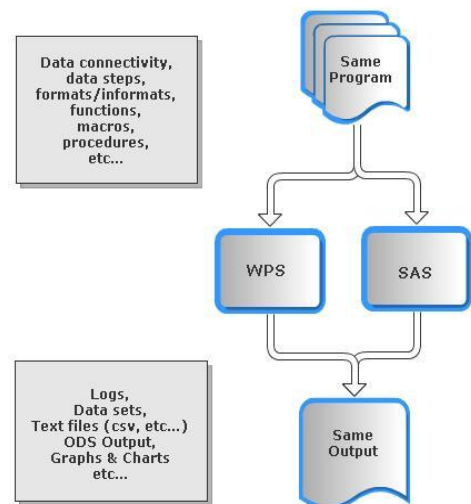

Access, manage and analyze large datasets effortlessly whether on a desktop, network server or mainframe. WPS effortlessly reads and writes SAS datasets and SPSS files giving you complete flexibility when supplying data to outside vendors or when working in a hybrid research and analytics environment.

Compared to other analytics software, WPS is easy to use, has a lower total cost of ownership and is less restrictive in its licensing. With WPS, you don't have to be concerned with additional fees if you are a data service provider using our software.

WPS is an integrated product that includes support for the core SAS language, eight database access engines, graphics and numerous statistical procedures that are most commonly used in business.
