

ZipName

Description: The ZipName macro takes a five character zip code and returns the state name in upper case.

Syntax

```
%ZipName(zipcode,MyStateName);
```

Notes

The zip code must be a five character code with leading zeros if necessary. If the zip code is not found, the returned argument is blank.

Example

```
DATA one;
  Input Zip $5.;
  %ZipName(Zip, MyStateName);
Cards;
43235
60601
;
RUN;

PROC Print data=one;
RUN;
```

WPS Listing

The WPS System

Obs	Zip	MyState Name
1	43235	OHIO
2	60601	ILLINOIS
