

ZipName1

Description: The ZipName1 macro takes a five character zip code and returns the state name in upper and lower case.

Syntax

```
%ZipName1(zipcode,MyStateName);
```

Notes

The zip code must be a five character code with leading zeros if necessary. If the zip code is not found, the returned argument is blank.

Example

```
DATA one;
  Input Zip $5.;
  %ZipName1(Zip, MyStateName);
Cards;
43235
60601
;
RUN;

PROC Print data=one;
RUN;
```

WPS Listing

```
      The WPS System

Obs      Zip      MyState
      Name
1      43235      Ohio
2      60601      Illinois
```
